

YogiSpeaks Website – Technical Requirements

1. Technology Stack (No WordPress, No AI Website Builder)

Frontend

- Next.js (Latest Stable Version)
- React.js
- TypeScript
- Tailwind CSS
- Framer Motion (for animations)

Backend

- Node.js
- NestJS (Preferred) or Express.js

Database

- PostgreSQL

ORM

- Prisma ORM

Authentication

- JWT Authentication
- Google Login (future-ready)

CMS

- Headless CMS (Strapi or Sanity) **or** a custom admin panel so you can edit content without coding.

2. Code Quality

The website must:

- Be **100% manually coded**.
- Not use AI-generated website builders.

- Not use copied source code.
 - Follow clean coding standards.
 - Be modular and maintainable.
 - Be fully documented.
-

3. Performance

The website should:

- Load in under 2 seconds.
 - Score 90+ on Google PageSpeed.
 - Be optimized for Core Web Vitals.
 - Use image optimization and lazy loading.
 - Use server-side rendering (SSR) or static generation where appropriate.
-

4. Scalability

The architecture should support:

- High traffic without crashing.
 - Thousands of concurrent users.
 - Easy addition of new courses, blogs, and features.
 - Horizontal scaling behind a load balancer if traffic grows.
-

5. Security

- HTTPS/SSL
 - Secure authentication
 - CSRF/XSS/SQL Injection protection
 - Input validation
 - Rate limiting
 - Regular backups
 - Secure environment variables
-

6. SEO

- Server-side rendering for SEO.
 - Dynamic meta tags.
 - Open Graph tags.
 - Structured data ([Schema.org](https://schema.org)).
 - XML sitemap.
 - robots.txt.
 - SEO-friendly URLs.
-

7. Admin Panel

A secure admin dashboard where you can:

- Add/edit courses.
- Add/edit blogs.
- Manage testimonials.
- Update homepage content.
- Change banners and images.
- Manage contact details.
- View inquiries.

No coding should be required for these tasks.

8. Hosting

The application should be deployable on:

- VPS
- AWS
- DigitalOcean
- Azure
- Google Cloud

Deployment should support Node.js.

9. Delivery

The developer must provide:

- Complete source code.
- Git repository.
- Deployment guide.
- Admin credentials.
- Database backup.
- API documentation.
- Environment configuration.

10. Support

The developer should provide:

- 30 days of free bug fixes.
- Assistance with deployment.
- Basic training on the admin panel.
- Optional Annual Maintenance Contract (AMC) quote for future support.
